
markdowner

This is a small script to compile markdown files to PDFs. It uses pandoc, latex for the compiling process. Prettier is used to format the markdown file. Also for converting markdown to tex a template file is used.

That code is not mine! It is included in the release installer binarys for convenience. For license information and more visit the respective sites:

- Latex (MiKTeX): <https://github.com/MiKTeX>
- Pandoc: <https://github.com/jgm/pandoc>
- Nodejs: <https://github.com/nodejs/node>
- Prettier: <https://github.com/prettier>
- Pandoc Template File: <https://github.com/Wandmalfarbe/pandoc-latex-template>

To install, run the intaller script you can find in the Releases.

To run the program after installing, just open a new terminal and type “markdowner”. This should print some instructions on usage.
